Total Expenditures	240,318.36
Total Revenue Subject to 5-Year Limitation	292,063.42
Total Expenditures - Total Revenue Subject to 5-Year Limitation	GC 66001(d)(1) Findings Requirement (51,745.06)

The Circulation fee can be used to improve traffic flow, decrease congestion, and eliminate dangerous situations caused by congestion (e.g. right hand shoulder passing). The projects identified in the Master Facilities Plan include intersection and turn lane improvements to maximize circulation and traffic signal improvements to enhance safety for emergency vehicle response.

Required Findings Under GC 66001(d)(1)

1. Purpose: The unexpended funds are to be used for a circulation study and traffic safety improvements.
2. Reasonable Relationship: The annual five-year capital improvement plan is updated as part of the annual budget process with appropriations for eligible projects limited to funding availability from the associated collected fees.
3. Funding Sources: The primary source of funding for these projects will be the Circulation Fund. Approximately \$1,030,000 is planned for a circulation study for Moonridge Road (\$30,000) and reconfiguration of Rathbun Drive to promote traffic safety and improve circulation (\$1,000,000). The remaining balance for Rathbun Drive will be funded by Measure Y, TOT funds.
4. Funding Dates: Revenue exceeded expenditures over the prior five years to set aside funding for upcoming projects. These projects are anticipated to be completed in 2026.
