Total Expenditures - Total Revenue Subject to 5-Year Limitation	GC 66001(d)(1) Findings Requirement (259,712.71)

The Drainage fund projects include the construction and enhancement of the local storm drain collection system, improvements to catch basis, and development of groundwater recharge facilities and wetland reserves as described in the Master Facilities Plan.

Required Findings Under GC 66001(d)(1)

1. Purpose: The unexpended funds are to be used for a drainage master plan. This plan will identify projects for development and will be earmarked to receive additional funding as appropriate.
2. Reasonable Relationship: The annual five-year capital improvement plan is updated as part of the annual budget process with appropriations for eligible projects limited to funding availability from the associated collected fees.
3. Funding Sources: The source of funding for this project will be the Drainage Fund. A total of \$200,000 is planned for the study. The remaining funds will be used towards implementation of project identified in the plan.
4. Funding Dates: Due to staffing limitations, the city has not been able to commence work on the master plan. The intention is to develop and circulate an RFP in 2026. Once an agreement is in place, the plan is anticipated to take twelve-eighteen months to complete.
