

Annual Impact Mitigation Fee Program Report

For the City of Lodi

For Fiscal Year 2022-23

This report contains information on the City of Lodi's Impact Mitigation Fee Programs (IMFP) for Fiscal Year 2022/23. This information is presented to comply with the annual reporting requirements contained in Government Code section 66000 *et seq.*, also known as AB1600. Please note that this annual report is not a budget document or audited financial statement; rather, it is compiled to meet reporting requirements. It reports revenues and expenditures for Fiscal Year 2022/23, and planned projects. The City Capital Improvement Program (CIP) includes information for funded projects. The projects listed in this report have been approved by Council and included in the 2023-2028 CIP. This report summarizes revenue and expenditure activity and fund balance since FY2018/19, and provides a 5-year revenue test using oldest revenues first to fund expenditures as required by AB 1600.

Government Code 66006 requires local agencies to submit annual and five-year reports detailing the status of the IMFP. The annual report must be made available to the public within 180 days after the last day of the fiscal year, and must be presented to the public agency (City Council) at least 15 days after it is made available to the public.

This report summarizes the following information for each of the development fee programs:

1. A brief description of the fee program.
2. Schedule of fees.
3. Beginning and ending balances of the fee program.
4. Amount of fees collected, interest earned, and transfers/loans.
5. Disbursement information (including interfund transfers/loans) and percentage of the project funded by fees.
6. A description of each interfund loan along with the date the loan will be repaid and the rate of interest.
7. The estimated date when projects will begin if sufficient revenues are available to construct the project.
8. Findings for each fee program.

More detailed information on certain elements of the various fees within the IMFP is available through other documents such as the Nexus Study approved by Resolution 2012-142, the IMFP Amendment approved by Resolution 2013-184, Resolution 2016-88 which eliminated previously authorized fee reductions enacted to incentivize development,

Resolution 2021-213 approving 2021 IMFP final report and schedule, and the City's Annual Budget. In the future, the CIP will contain relevant program information as well. The City does not earmark IMFP revenue for any specific project as the fees are collected; rather, the fees are applied toward a series of capital improvement projects authorized within the specific IMFP. No refunds were made during Fiscal Year 2022/23 pursuant to subdivision (e) of Section 66001 and any allocation pursuant to subdivision (f) of Section 66001.

Presentation of Information by Fund

This report presents information by Fund starting with a summary overview of FY2022/23 Revenues and Expenses, FY2022/23 Project disbursements, and Projects for FY2022/23. Following this overview is a more detailed 5-year review of revenues and expenses and fund balance to demonstrate both the collection and use of the fees over time.

The report presents the total FY2022/23 and FY2021/22 Project Amounts funded from impact fees and the percent funded from non-fee sources. The revenue table identifies the age of the total revenue available or available fund balance by demonstrating which fiscal year received the revenue. The 5-year Expenditure table presents the use of revenue collected in the year that funded the project. This demonstrates that the oldest revenue is spent before new funds, also known as the First-in, First-out (FIFO) basis.

1. Fees effective January 1, 2023 through December 31, 2023 (unless City Council adopts an updated fee schedule prior to that date).

Water Fee (Fund 562)

The Water IMF was first adopted by the City Council in 1991 and was updated most recently in July of 2021 when the fee program nexus study was updated by the City's contracted consultants, Harris & Associates and Goodwin Consulting Group.

The 2021 Nexus Study identified a current over build of treatment capacity and a need for new water supply facilities at buildout. The total estimated cost of treatment facilities was included in the Nexus Study and totaled \$54.8 Million in 2018 dollars (including debt service). The total estimated new water supply facilities cost was included in the Nexus Study and totaled \$4 Million in 2012 dollars. In 2018 the City conducted a Non-potable Water study to determine that continuing to supply the demand for non-potable water from WID's surface water is still the most economical option for the City as development installs the distribution network.

For purposes of the 2021 study, a plan-based fee calculation methodology was used. Each unit was assumed to receive a blended water supply of groundwater and surface water consistent with the system wide ratios of ground water to surface water supplies. For treatment, 18.68% of costs are attributable to new development. For supply, 100% of the costs are attributable to new development. There is no existing deficiency as current treatment and storage needs are met by current facilities. The total cost of the new non-potable water pump station sand other capital costs, is approximately \$2.8 million. The non-potable water fees would apply in conjunction with the water fee for all new connections to the City's water system.

Ending Balance for June 30, 2023 is what is shown as the balance on the City's records, and which may include several different asset and liability accounts not depicted below, but which still affect ending balance.

There are no projects programmed in this fund for Fiscal Year 2023/24. Future projects will be included in the future year CIP documents.

Required Findings

1. The purpose of the Water Fee is to fund water facility costs, including construction of a new storage tank, construction of a new well, and a proportionate share of treatment capacity.
2. The reasonable relationship between the Water Fee and the purpose for which it is charged is demonstrated in the *City of Lodi Impact Mitigation Fee Program Nexus Study - 2021 Update July 2021, effective September 19, 2021*.
3. The sources and amounts of funding anticipated to complete the future City water facilities or to fund new development's proportionate share of existing facilities are identified in this report and the City of Lodi CIP with the FY 2023/24 budget cycle (shown in 2021 dollars). There is one project identified for funding in the FY 2023/24 budget cycle, Southwest Water Tank.
4. In order to maintain adequate water pressure and supply throughout the buildout of the City of Lodi, a new well and storage reservoir must be constructed and new development must bear their proportionate share of the treatments plant's capacity expansion costs.

5. The approximate date for funding and constructing the new water supply facility is not known at this time due to the City' slow rate of growth, but will be necessary to serve cumulative new development. Debt service for the treatment plant is scheduled to continue through June 1, 2040. Additional projects will be included in future year CIP documents.

2. Wastewater Fee Program (Fund 533)

Wastewater Treatment IMF

The Wastewater Treatment IMF was first adopted by the City Council in 1991 and was updated most recently in July of 2021 when the fee program nexus study was updated by the City's contracted consultants, Harris & Associates.

The 2021 Nexus Study identified a need for the Wastewater Lines to support development in all areas of the City. New development will be required to fund a proportionate share of existing overbuilt infrastructure and future infrastructure required to serve new development needs (including potential financing costs).

For purposes of the study, a plan-based fee calculation methodology was used. There are no existing deficiencies in this fee program. This fee program uses a full buildout projection, rather than the 2035 projection because the facilities will serve the entire buildout population.

Ending Balance for June 30, 2023 is what is shown as the balance on the City's records, and which may include several different asset and liability accounts not depicted below, but which still affect ending balance.

There currently are no projects programmed in this fund as all facilities have been constructed.

Required Findings

1. The purpose of the Wastewater Fee is to fund wastewater facility costs, including a proportionate share of the wastewater treatment plant.
2. The reasonable relationship between the Wastewater Treatment Fee and the purpose for which it is charged is demonstrated in the *City of Lodi Impact Mitigation Fee Program Nexus Study – 2021 Update, July 2021, effective September 19, 2021*.
3. The sources and amounts of funding anticipated to complete the future City wastewater facilities or to fund new development's proportionate share of existing facilities are identified in this report and the City of Lodi CIP with the FY 2023/24 budget cycle (shown in 2021 dollars). There are no projects identified for funding in the FY 2023/24 budget cycle.
4. Each new development project proportionally increases the demand for wastewater collection based on the type of development's wastewaters generation rates. Each development will pay their fair share based on their estimated generation rates.
5. Facilities in this program have already been constructed. Fee revenue pays development's proportionate cost of currently overbuilt facilities. Current debt service is scheduled to continue through October 1, 2037.

South Wastewater Trunk Line IMF

The Wastewater Treatment IMF was first adopted by the City Council in 1991 and was updated most recently in July of 2021 when the fee program nexus study was updated by the City's contracted consultants, Harris & Associates.

The 2021 Nexus Study identified a current over build of wastewater treatment capacity and no need for additional treatment facilities at buildout. Current facilities are built such that 100% of the facilities needed to serve new development at buildout have already been constructed and financed. Wastewater fee revenue will be used solely to fund debt service on bonds issued to deliver improvements.

For purposes of the study, a plan-based incremental cost fee calculation methodology was used. Debt instruments have been issued at various times for the different phases of wastewater improvements. In all, 45.3% of outstanding debt is attributable to new development and up to 45.3% of outstanding debt costs as of August 2012 can be paid for from the Wastewater Fee. There are no existing deficiencies as 100% of buildout needs are served by current infrastructure.

This zone based IMF program funds new development's fair share of the South Wastewater Trunk Line serving the South Area.

Ending Balance for June 30, 2023 is what is shown as the balance on the City's records, and which may include several different asset and liability accounts not depicted below, but which still affect ending balance.

There are no projects programmed in this fund for Fiscal Year 2023/24. Future projects will be included in the future year CIP documents.

Required Findings

1. The purpose of the South Wastewater Trunk Line Fee is to fund costs associated with the South Sewer Trunk Line facility that is required to serve future development in the South Area.
2. The reasonable relationship between the South Wastewater Trunk Line Fee and the purpose for which it is charged is demonstrated in the *City of Lodi Impact Mitigation Fee Program Nexus Study - 2021 Update, July 2021, effective September 19, 2021*.
3. The sources and amounts of funding anticipated to complete the future South Sewer Trunk Line are identified in this report and the City of Lodi CIP with the FY 2023/24 budget cycle (shown in 2021 dollars). There are no projects identified for funding in the FY 2023/24 budget cycle.
4. Each new development project proportionally increases the demand for wastewater collection based on the type of development's wastewaters generation rates. Each development will pay their fair share based on their estimated generation rates.
5. The approximate date for fully funding and constructing the complete South Wastewater Trunk Line is not known at this time due to the City's slow rate of growth, but will be necessary to serve cumulative new development.

3. Storm Drainage Fee (Funds 535)

The Storm Drainage IMF was first adopted by the City Council in 1991 and was updated most recently in July of 2021 when the fee program nexus study was updated by the City's contracted consultants, Harris & Associates and Goodwin Consulting Group.

The 2021 Nexus Study identified the need for new Storm Drainage Basin areas to serve the needs of new development. The 2021 Nexus Study determined that in some areas, new development would be responsible for fully constructing and funding its own infrastructure demands. In other areas, a fee is required to facilitate the construction of necessary improvements. The update to the fee is to include the cost of the funded facilities to account for inflation and the removal of the pipes that will be developer constructed from the zone fees.

For purposes of this study, a plan based fee methodology was used. There are no existing deficiencies in this program. Current development is served by current infrastructure. Future development will either directly construct and finance its own storm drainage facilities, or pay into this fee program, depending on its geography within the City. This zone based IMF program funds new development's fair share of storm drainage facilities necessary to serve each zone's needs.

Ending Balance for June 30, 2023 is what is shown as the balance on the City's records, and which may include several different asset and liability accounts not depicted below, but which still affect ending balance.

There are no projects programmed in this fund for FY 2023/24. All facilities in this program have been constructed or will be privately funded.

Required Findings

1. The purpose of the Storm Drainage fee is to fund the storm drainage costs that include a proportionate share of storm drainage basins and pipe costs depending on the geography of each project.
2. The reasonable relationship between the storm drainage fee and the purpose for which it is charged is demonstrated in the *City of Lodi Impact Mitigation Fee Program Nexus Study - 2021 Update, July 2021, effective September 19, 2021*.
3. The sources and amounts of funding anticipated to complete the future storm drainage facilities are identified in this report and the City of Lodi CIP with the FY 2023/24 budget cycle (shown in 2021 dollars).
4. Each new development project proportionally increases the additional runoff generating a need for additional storm drainage infrastructure based on the runoff coefficient for that respective type of development. Each development will fund their fair share of infrastructure in their zone based on the increase in impervious area generated by the development.
5. The approximate date for funding and constructing these facilities is not shown in this report. Future projects will be included in future year CIP documents. There are no projects identified for funding in the FY 2023/24 budget cycle.

4. Transportation Fee Program (Fund 308)

The Transportation IMF was first adopted by the City Council in 1991 and was updated most recently in July of 2021 when the fee program nexus study was updated by the City's contracted consultants, Harris & Associates.

The 2021 Nexus Study identified \$42.7 million in combined traffic signal and roadway improvements needed to serve the City. The overwhelming majority (75%) of the Harney Lane improvements were anticipated to be funded by sources outside the IMFP. The large majority (16%) of the Victor Rd. improvements are also anticipated to be funded by sources outside the IMFP. The Harney Lane project was completed in the summer of 2018. The 2012 Nexus Study anticipated \$2,612,445 in 2020 dollars to be spent from the IMFP on the Harney Lane project. The project was completed without using IMFP funds, leaving the balance available for other listed IMFP improvements. Traffic Signals are included in the Transportation IMF based on new developments share of trips through the various intersections. New developments share ranges from 20-100% of each project with new developments share identified in the nexus study.

For purposes of the study, a plan-based fee calculation methodology was used. Trip generation rates and pass-by trip percentages were used to develop DUE factors for each land use type. These DUE factors were then used to allocate costs to each land use type. There is no existing deficiency as current treatment and storage needs are met by current facilities.

Ending Balance for June 30, 2023 is what is shown as the balance on the City's records, and which may include several different asset and liability accounts not depicted below, but which still affect ending balance.

There are three projects programmed in this fund for FY 2023/24, including Victor/Guild Signal, Turner/Ca Signal and Harney Lane Widening. Future projects will be included in the future year CIP documents.

Required Findings

1. The purpose of the Transportation fee is to fund traffic facility costs that include a proportionate share of new traffic signals and road widening projects.
2. The reasonable relationship between the transportation fee and the purpose for which it is charged is demonstrated in the *City of Lodi Impact Mitigation Fee Program Nexus Study - 2021 Update, July 2021, effective September 19, 2021*.
3. The sources and amounts of funding anticipated to complete future transportation facilities are identified in this report and the City of Lodi CIP with the FY 2023/24 budget cycle (shown in 2021 dollars).
4. Each new development project generates additional trips and adds to the incremental need for roadway capacity improvements. New development will be responsible to maintain roadway improvement projects of a LOS E as identified in the Nexus study.
5. The approximate date for funding and constructing some of these facilities is shown in this report. Additional projects will be included in future year CIP documents.

6. Police Fee Program (Fund 435)

The Police IMF was first adopted by the City Council in 1991 and was updated most recently in July of 2021 when the fee program nexus study was updated by the City's contracted consultants, Harris & Associates.

The 2021 Nexus Study identified that the current police station is adequate to serve the City's needs through 2035. New development will drive the need for new police personnel who will occupy space within the existing police station and the growth in residents. Therefore it is appropriate for new development to fund its share of the existing police station, including debt service.

For purposes of the study, a plan based fee methodology was used establishing a level of service standard of 1.70 police personnel (this includes both sworn and non-sworn officers) per thousand residents was used. There are no existing deficiencies in this fee program. Based on this methodology, 66% of the cost of the police station is allocated to existing development and 19% for development beyond 2035. The remaining 15% is allocated to anticipated development through 2035. A total of \$4.1 Million of debt service cost is eligible for allocation to new development. In addition, \$537,784 in vehicle costs (in 2020 dollars) was allocated to new development. These are the new vehicles required to serve new officers required by new development.

Ending Balance for June 30, 2023 is what is shown as the balance on the City's records, and which may include several different assets and liabilities accounts not depicted below, but which still affect ending balance.

There are no programmed projects for FY 2023/24 in this fund. New vehicle purchases are planned only as new officers are hired to serve new development. Future projects will be included in the future year CIP documents.

Required Findings

1. The purpose of the Police Fee is to fund police-related capital costs, including financing costs, attributable to the impact from new development.
2. The reasonable relationship between the Police Fee and the purpose for which it is charged is demonstrated in the *City of Lodi Impact Mitigation Fee Program Nexus Study - 2021 Update, July 2021, effective September 19, 2021*.
3. The sources and amounts of funding anticipated to fund new development's proportionate share of existing facilities or vehicle costs are identified in this report (shown in 2021 dollars).
4. Each new development project adds additional residents and employees and adds to the incremental need for additional police facilities and equipment. The police facilities and equipment must be expanded as new development occurs.
5. Facilities in this program have already been constructed. Fee revenue pays development's proportionate cost of currently overbuilt facilities, including debt service. Additionally, fee

revenue will fund new development's proportion cost of new vehicle costs to support new officers through 2035.

7. Fire Fee Program (Fund 436)

The Fire IMF was first adopted by the City Council in 1991 and was updated most recently in July of 2021 when the fee program nexus study was updated by the City's contracted consultants, Harris & Associates and Goodwin Consulting Group.

The 2021 Nexus Study identified a need to expand and relocate Fire Station 2 in order to serve buildout of the City. The study also identified an overbuild of Fire Station 4 carried over. Fire Station 4 was constructed in part from a loan from the Water Fee Program to the Fire Fee Program. As of June 30, 2022, the loan was paid off.

For purposes of the study, a plan based fee methodology was used. There are no existing deficiencies in this fee program. Based on this methodology, 81% of the cost of the expanded fire station is allocated to existing development and 19% is allocated to anticipated development through 2035. A total of \$4.5 Million is eligible for allocation to new development. However, because the anticipated cost of Station 2 expansion was only \$1.6 Million, including financing costs, and the outstanding loan from the Water Fee Program was \$1.2 Million, as of the date the Nexus Study was prepared, only \$2.8 Million was allocated to new development.

Ending Balance for June 30, 2023 is what is shown as the balance on the City's records, and which may include several different asset and liability accounts not depicted below, but which still affect ending balance.

The expansion of Fire Station 2 and the construction of Fire Station 4 (financed with a loan from the Water Fee Program) are attributable to new development and new development will be required to pay for 100% of the costs associated with each.

There are no programmed projects for FY 2023/24 in this fund. Future projects will be included in the future year CIP documents.

Required Findings

1. The purpose of the Fire Fee is to fund fire-related capital costs, including financing costs, attributable to the impact from new development.
2. The reasonable relationship between the Fire Fee and the purpose for which it is charged is demonstrated in the *City of Lodi Impact Mitigation Fee Program Nexus Study - 2012 Update, August 2012, effective October 14, 2012*.
3. The sources and amounts of funding anticipated to fund new development's proportionate share of existing facilities or vehicle costs are identified in this report (shown in 2021 dollars).
4. Each new development project adds additional residents and employees and adds to the incremental need for additional fire facilities and equipment. The fire facilities and equipment must be expanded as new development occurs.
5. Facilities in this program have already been constructed. Fee revenue pays development's proportionate cost of currently overbuilt facilities, including external and internal loan

repayments. Internal loan repayments are scheduled as revenues are received and the current repayment date is unknown.

8. Parks Fee Program (Fund 437)

The Parks IMF was first adopted by the City Council in 1991 and was updated most recently in July of 2021 when the fee program nexus study was updated by the City's contracted consultants, Harris & Associates and Goodwin Consulting Group.

The 2021 Nexus Study identified a need to improve three parklands located within the City to serve new development. Additionally, all of the neighborhood parks (totaling 5.5 acres per 1,000 residents) required to serve new development will be privately funded by future development. In 2013, Resolution 2013-184 was passed to amend the parks IMFP to include neighborhood parks. The Neighborhood Parks included in the 2013 update only service the area that is bounded by Lower Sacramento Road on the east, Woodbridge Irrigation District canal on the North, Harney Lane on the south and one half mile west of Lower Sacramento Road on the west.

For purposes of the study, a level of service standard was used establishing a total of 8.0 acres of combined parkland, open space and special use areas per 1,000 residents. The Neighborhood Parks for the purposes of the study, a level of service standard was used establishing a total of 2.5 acres of neighborhood parks per 1,000 residents. There are no existing deficiencies in this fee program. Three types of parkland exist within the City including neighborhood, community and regional. The IMF only covers new development's share of the community and regional parks, a portion of natural open space and special use areas. Neighborhood parks, \$11.4 million is allocated to future development based on the number of persons served.

Ending balance for June 30, 2023 is what is shown as the balance on the City's records, and which may include several different assets and liabilities accounts not depicted below, but which still affect ending balance.

Projects funded in Fiscal Year 2023/24 include DeBenedetti Park Development. Future projects will be included in the future year CIP documents as shown below.

Required Findings

1. The purpose of the Parks Fee is to fund facilities attributable to the impact from new development.
2. The reasonable relationship between the Parks Fee and the purpose for which it is charged is demonstrated in the *City of Lodi Impact Mitigation Fee Program Nexus Study - 2012 Update, August 2012, effective October 14, 2012*.
3. The sources and amounts of funding anticipated to fund new development's proportionate share of existing facilities are identified in this report (shown in 2021 dollars) and in the Fiscal Year 2023/24 Budget and CIP Document.
4. Each new development project adds additional residents and employees and adds to the incremental need for additional community park facilities. The community park portion of the IMFP for each type of development is determined based on the number of resident and employee equivalents that each type of development will add.

5. The approximate date for funding and constructing some of these facilities is shown in this report. Additional projects are included in the City's CIP documents.

9. Electric Utility Fee Program (Fund 505)

The Electric Utility IMF was first adopted by the City Council in 2007 and was updated most recently in July of 2021 when the fee program nexus study was updated by the City's contracted consultants, Harris & Associates.

The 2021 Nexus Study identified a need for new electric utility facilities to serve additional demand for electricity caused by new development. A Distribution Capacity Plan was used to determine peak load demand and the system is sized to meet peak load needs of the end users (consumers of electricity). The assumptions from the 2012 IMFP remain the same, aside from the 2017 addition of the 230 kV intertie system designed to increase ~~the~~ electrical systems capacity and reliability.

For purposes of the study, a plan based fee methodology was used. There are no existing deficiencies in this fee program. A total of \$6.5 million (in 2020 dollars) is allocated to new development covering a variety of electric utility facilities including distribution reinforcements, feeder additions, an added bank, and overhead and underground line extensions, 1272 feeder extension for South West development and 230 kV intertie system.

Ending Balance for June 30, 2023 is what is shown as the balance on the City's records, and which may include several different assets and liabilities accounts not depicted below, but which still affect ending balance.

Projects funded in Fiscal Year 2023/24 include 1267/1247 Feeder Extension, Henning Getaway Upgrade Projects, McLane 1229 Extension and Killelea ~~1211~~ Reconductor. Future projects will be included in the future year CIP documents.

Required Findings

1. The purpose of the Electric Utility Fee is to fund electric utility facilities attributable to the impact of new development.
2. The reasonable relationship between the Electric Utility Fee and the purpose for which it is charged is demonstrated in the *City of Lodi Impact Mitigation Fee Program Nexus Study - 2021 Update, dated July 2021, effective September 19, 2021*.
3. The sources and amounts of funding anticipated to fund new development's proportionate share of existing facilities are identified in this report (shown in 2021 dollars) and in the City of Lodi Fiscal Year 2023-24 Budget and CIP.
4. The development of new residential and non-residential land uses in the City will require electrical service and increase the need for additional electrical infrastructure. Each development pays their fair share of the electric infrastructure based on the average load factor generated by each type of development.
5. The approximate date for funding and constructing some of these facilities is shown in this report. Additional projects will be included in future year CIP documents.

10. General City Facilities Fee Program (Fund 438)

The General City Facilities IMF was first adopted by the City Council in 1991 and was updated most recently in July of 2021 when the fee program nexus study was updated by the City's contracted consultants, Harris & Associates.

The 2021 Nexus Study identified a need for additional library building space, a remodel of the public safety building, updates to the City's General Plan, and the IMFP, all of which are required to serve new development.

For purposes of the study, a plan based fee methodology was used. New development is responsible for 19% of the cost of the General Plan Update and the Public Safety Building Remodel and total costs. Existing development is responsible for 81% of the cost of the General Plan Update and the Public Safety Building Remodel and of the cost for both the expansion of the library and fee program updates.

Ending Balance for June 30, 2023 is what is shown as the balance on the City's records, and which may include several different assets and liabilities accounts not depicted below, but which still affect ending balance.

There are no projects programmed in this fund for Fiscal Year 2023/24. Future projects will be included in the future year CIP documents.

Required Findings

1. The purpose of the General City Facilities Fee is to fund general city facilities costs, including remodeling of the existing public safety building, updating the City's general plan, library expansion, and fee program updates, attributable to the impact of new development.
2. The reasonable relationship between the General City Facilities Fee and the purpose for which it is charged is demonstrated in the *City of Lodi Impact Mitigation Fee Program Nexus Study - 2012 Update, August 2012, effective October 14, 2012*.
3. The sources and amounts of funding anticipated to fund new development's proportionate share of existing facilities are identified in this report (shown in 2021 dollars) and in the City of Lodi FY 2023/24 Budget and CIP. There are no projects identified for funding in the FY 2023/24 budget cycle.
4. Each new residential and non-residential development will add additional residents and employees who add incremental usage of general public facilities. Each land use will pay a fee based on the number of persons or employees generated by that type of development.
5. The approximate date for funding and constructing some of these facilities is shown in this report. Additional projects will be included in future year CIP documents.

10. Art in Public Places Fee Program (Fund 434)

The General City Facilities IMF was first adopted by the City Council in 1991 and was updated most recently in July of 2021 when the fee program nexus study was updated by the City's contracted consultants, Harris & Associates.

The 2021 Nexus Study identified a service standard of approximately \$34.61 (in 2020 dollars) per person served in the City for public art. For purposes of the study, a plan based fee methodology was used based on the then existing inventory of art and its estimated value divided by the population served. New development is responsible for 100% of the new art at the \$34.61 (in 2020 dollars) per person served standard.

Specific art pieces and specific locations for those pieces are not identified in the study, but will be determined as fee revenue becomes available.

Ending Balance for June 30, 2023 is what is shown as the balance on the City's records, and which may include several different assets and liabilities accounts not depicted below, but which still affect ending balance.

Projects programmed in this fund for Fiscal Year 2023/24 include Traffic Control Bo Paint, Metal Art Sculpture, HSS Bike Rack Art and Storm Drain Art.

Required Findings

1. The purpose of the Art in Public Places Fee is to fund public art attributable to the impact of new development.
2. The reasonable relationship between the Art and Public Place Fee and the purpose for which it is charged is demonstrated in the *City of Lodi Impact Mitigation Fee Program Nexus Study - 2021 Update, July 2021, effective September 19, 2021*.
3. The sources and amounts of funding anticipated to fund new development's proportionate share of existing facilities are identified in this report (shown in 2021 dollars) and the Fiscal Year 2023/24 Budget.
4. Each new residential and non-residential development will add additional residents and employees who add incrementally to the need for art in public places. Fees will be calculated based on the number of persons served, this ensures that each type of development pays their fair share of the identified project costs.
4. The approximate date for funding and constructing some of these facilities is dependent on availability of sufficient fee revenue. Additional projects will be included in annual budgets as revenues become available.

11. Regional Transportation Impact Fee Program (Fund 314)

The Regional Transportation Impact Fee (RTIF) is a county-wide, multi jurisdiction capital improvement funding program intended to cover a portion of the costs for new transportation facilities required to serve new development within the County of San Joaquin.

New development throughout the county is subject to the fee. The funding derived from the RTIF program is used in combination with other funding available to complete the needed transportation and transit improvements. More information on the program, including the RTIF Annual Report, including the most recent Nexus report, can be found at www.sjocog.org.

Due to the regional nature of transportation impacts and the regional benefit of transportation improvements, it is likely that many projects utilizing RTIF funds collected by the City of Lodi will actually be located outside the City's boundaries. The relationship between the impacts and benefits of the development and those projects is identified in the Nexus Study.

Required Findings

1. The purpose of the RTIF program is to provide new development's share of funding for regional transportation improvements facilities as required at build-out of the region.
2. The reasonable relationship between the RTIF fee and the purpose for which it is charged is demonstrated in the San Joaquin Regional Transportation Impact Fee *Nexus Study* dated April 24, 2017, amended June 2018.
3. The sources and amounts of funding anticipated necessary to complete RTIF improvements are in the San Joaquin Regional Transportation Impact Fee *Nexus Study* dated April 24, 2017, amended June 2018. The potential sources of funding for existing development's share is gas tax, and other local, state, and federal funding.
4. The approximate date for funding and constructing some new facilities is shown in the SJCOG Regional Congestions Management Program report.
